

WE ARE INTRODUCING AND
OPERATING USEFUL INFORMATION
TECHNOLOGIES IN ORGANIZATIONS

AC people

The AUTOCONT team in the Czech Republic consists of almost 800 employees. Most of them have extensive experience in their fields. We also employ a large number of young people and students who supplement the extensive company experience with a great deal of enthusiasm and offer an unbiased view of today's IT. We have more than 450 certified specialists with approximately 1,000 certification degrees related to key technology partners.

AC structure

AUTOCONT adapts its internal organization to customer needs and possibilities. Complex enterprise projects of large customers require a different approach than smaller projects of medium-sized companies. AUTOCONT is divided into 3 separate business units:

AUTOCONT EBS

This unit focuses on the implementation of large enterprise projects of large customers. To do so, AUTOCONT has shaped its internal structure, which now consists of several professional divisions:

- CIT - Corporate IT Infrastructure
- ECP - Enterprise Cloud Provider (DataSpring)
- ITSM - Information Technologies Service Management

AUTOCONT PAS

focuses on the implementation and support of Microsoft Dynamics business information systems. Solutions designed to work with data and Business Intelligence, websites, portals and e-commerce are also very important. The many years of experience that AUTOCONT specialists have also helped us to create a wide range of field solutions which further strengthen AUTOCONT's position as the leading company in this field in the Czech Republic.

AUTOCONT MM

Projects and services for medium and small customers are the main focus of this section of AUTOCONT. Primarily, this section offers IT infrastructure, corporate applications, business process support, user care and IT security. In certain areas and where it makes sense under the concept called "We are your IT", we are able to take over the entire IT operations of the given customer. This approach provides owners and customers with reliable IT operation for adequate costs. This feature may be used by IT managers as an advisor, consultant or technical specialist.

AC coverage

AUTOCONT's services are available in all regional and other cities in the Czech Republic and Slovakia, which is a great advantage for many customers.

IT INFRASTRUCTURE

Issues related to IT infrastructure are very complex. It begins with the cables laid in the ground and diesel generators providing power in case of a blackout. It continues through the construction of economically efficient data centres including cloud computing technologies, designs for powerful data repositories, access networks, desktop and application visualizations and the implementation of directory services, electronic email and efficient company communication tools. Systems for Asset Management, Service Desk and IT monitoring and control follow. Warranty and post-warranty service and subsequent services needed to support the operation of IT represent the last part of the process, albeit a very important one: Not every customer needs or uses all these services and systems. It depends on the size of the organization / company and on its focus. The important thing, however, is that whatever you may need, AUTOCONT can provide it.

CYBER SECURITY

With the increasing digitization of business processes and communication across the entire society, this area is becoming more important with each passing day. We deal with the security of end devices, including mobile platforms, networks and Internet or cloud connections, protection and management of user identities, protection of data against leakage and theft, and finally, protection of applications and data centres. We implement security management systems. A separate chapter in IT business is ensuring the security of people and buildings. A very important part of our service is security monitoring and ICT consulting services.

OUTSOURCING

AUTOCONT offers services in the field of outsourcing starting with the operation of end devices, through the outsourcing of server and network management all the way to comprehensive outsourcing of the customer IT infrastructure and applications, including possible takeover of assets and employees. These services are managed and performed in accordance with ISO / IEC 20,000 standards and are constantly available (24/7).

One specific form of outsourcing is a concept called „We are your IT“, designed for small and medium-sized companies that are willing and able to hand over IT company operations to AUTOCONT. In addition to our own outsourcing of specific technologies and services, one key aspect is that AUTOCONT is able to integrate customer applications and participate in IT development.

BUSINESS APPLICATIONS

AUTOCONT's portfolio focusing on applications is very complex. It includes company information systems for the operation of smaller or larger companies, customer relationship management including support for business, marketing, projects, service and human resource management systems. Everything is interconnected with data repositories, Business Intelligence and digitization systems, document administration and management, web and portal solutions, e-commerce and digital strategies.

Practical experience gained from many projects has helped us to create a wide range of industry solutions. The main goal of our customers is always the same - higher efficiency, cost savings and higher revenues through process automation. Our task is to design the optimal path and the means to get there, and implement the proposed solution together with the customer.

CLOUD SERVICES

Cloud computing is a fast-expanding field and AUTOCONT offers services based on public, private or hybrid cloud systems. AUTOCONT provides cloud services using its own geographically separated data centres in the Czech Republic, as well as data centres situated abroad. AUTOCONT offers cloud services dealing with infrastructure, BI and data repositories, IT security and databases, cloud consulting services, and also offers and implements migration scenarios and handles cloud operations.

IT ARCHITECTURE AND STRATEGY

As for projects dealing with business consulting services, AUTOCONT uses its expertise, long-term experience and the actual procedures applied across company architecture (Enterprise Architecture), process analysis and process management. AUTOCONT offers ICT strategy, development and management services, as well as ICT security consulting. AUTOCONT also provides training and certification exams required by the ICT field and strategy. Everything is interconnected through integration services which are provided in the form of consultation, project or service contracts while making sure that the relevant solution meet the client's needs.

AC helps

As a successful company, each year we donate hundreds of thousands of Czech crowns to non-profit organizations and projects. Our goal is direct, long-term and unpretentious help. We cooperate with entities based in individual regions as well as with foundations operating nationwide.

AC facts

AUTOCONT a.s.

Legal form:

Joint stock company (common shares registered under a name, not publicly tradeable).

Registered capital: CZK 11,000,000.00

Registered address: Hornopolní 3322/34, 702 00 Ostrava

Identification number: 04308697
